## Overview

### Search any Portion of the Repository

HarFind is an exciting utility that will find objects in an AllFusion Harvest® Change Manager Repository containing a matching string. For example, you can search for all files with a ".cpp" extension for an occurrence of the string, "power".

### Simple Intuitive Interface

- Multiple views, search one or many repositories
- See the AllFusion Harvest repository in one view, and search results in a second view
- Most recent search settings
- The most recent settings for HarFind are available in drop down lists
- Context preserved between sessions
- All HarFind settings saved to eliminate repetitive setup activities

### New Release 2.0

HarFind 2.0 has great new capabilities to address many audit and other data mining requirements for managing Harvest. Since collecting information and format it to be easily used by report writing programs, spreadsheets, etc is not possible with Harvest, HarvestFind V2.0 is indispensable for impact-analysis and project scoping.

### Harvest R7 and CA Smart

HarFind V2.0 supports Harvest V7 but continues support for V5.1 and V5.2.

**Release 2.0 is CA-Smart certified**
